- Pokémons with barred names mean that there are either not still not available in the game, or that it is worthwhile to wait a Community Day before evolving it.
- Moves with symbol † are legacy and unavailable.
- 🔮 means that the Pokémons can mega-evolve at generation 6.
- Neutral DPS, Effective Health, and TDO are computed for Pokémons at level 40, with perfect IVs.
- **Neutral DPS** (Damage per Second) represents how much damage a Pokémon can make in a second. It depends on:
  - the Pokémons's attack stat at level 40 (base ATK + ATK IV)  $\times 0.7903$ ,
  - the Pokemon's fast and charged moves (they define the damages and the necessary energy for realising the damages). The fast move generates energy used to launch the charged move.
  - the "Same Type Attack Bonus" (STAB, 25% damage boost of a move when it is the same type as one of the types of the Pokémon using the move).

$DPS \leq 12.5$  not an attacker

$12.5 < DPS \leq 16$  a good attacker (but privilege ATT IV = 15, and level up to 35)

$DPS > 16$  excellent attacker

- The **Effective Health** (EH) defines the bulkiness of a Pokémon. At level 40, it is computed via the formula:

$$EH = (\text{base DEF} + \text{DEF IV}) \times (\text{base HP} + \text{HP IV}) \times \frac{0.7903^2}{900}$$

$EH \leq 25$  very fragile

$25 < EH \leq 30$  fragile but viable

$30 < EH \leq 35$  bulky

$EH > 35$  very bulky

- **TDO** (Total Damage Output) represents how much damage a Pokémon can make before it faints. It is computed via the formula:  $TDO = DPS \times EH$ .
