- Pokémons with barred names mean that there are either not still available in the game, or that it is worthwhile to wait a Community Day before evolving it.
- Moves with symbol † are legacy and unavailable.
- 🔮 means that the Pokémon can mega-evolve at generation 6.
- Neutral DPS, Effective Health, and TDO are computed for Pokémons at level 40, with perfect IVs.
- **Neutral DPS** (Damage per Second) represents how much damage a Pokémon can make in a second. It depends on:
 - the Pokémon's attack stat at level 40 (base ATK + ATK IV) $\times 0.7903$,
 - the Pokémon's fast and charged moves (they define the damages and the necessary energy for realising the damages). The fast move generates energy used to launch the charged move.
 - the "Same Type Attack Bonus" (STAB, 25% damage boost of a move when it is the same type as one of the types of the Pokémon using the move).

$DPS \leq 12.5$ not an attacker

$12.5 < DPS \leq 16$ a good attacker (but privilege ATT IV = 15, and level up to 35)

$DPS > 16$ excellent attacker

- The **Effective Health** (EH) defines the bulkiness of a Pokémon. At level 40, it is computed via the formula:

$$EH = (\text{base DEF} + \text{DEF IV}) \times (\text{base HP} + \text{HP IV}) \times \frac{0.7903^2}{900}$$

$EH \leq 25$ very fragile

$25 < EH \leq 30$ fragile but viable

$30 < EH \leq 35$ bulky

$EH > 35$ very bulky

- **TDO** (Total Damage Output) represents how much damage a Pokémon can make before it faints. It is computed via the formula: $TDO = DPS \times EH$.
