- Leagues:
  - Great league (CP ≤ 1500),
  - ▶ Ultra league ( $CP \le 2500$ ),
  - Master league (no CP limit).
- Moves: They are all defined differently from PvE. In PvP, a move is defined by its power (the amount of damage it deals), its energy (the amount of energy it generates or uses) and its duration (the number of turns the move lasts, each turn lasts for 0.5s).

Three measures can be defined:

- DPT stands for Damage per turn. Equivalent to DPS in non-PvP scenarios. Higher is better.
   Only for fast moves.
- EPT stands for Energy per turn. Equivalent to EPS in non-PvP scenarios. Higher is better.
   Only for fast moves.
- DPE stands for Damage per energy. DPE describes how efficiently you deal damage in comparison to the energy spent. Higher is better. Only for charge moves.

Examples of PvP stats for fast moves are:

| Move            | Power | Energy | Duration (s) | DPT  | EPT  |
|-----------------|-------|--------|--------------|------|------|
| Mud Shot        | 3     | 9      | 2            | 1.50 | 4.50 |
| Psycho Cut      | 3     | 9      | 2            | 1.50 | 4.50 |
| O Thunder Shock | 3     | 9      | 2            | 1.50 | 4.5  |

Examples of PvP stats for charge moves are:

| Move                             | Power | Energy | DPE  |
|----------------------------------|-------|--------|------|
| <ul> <li>Hydro Cannon</li> </ul> | 90    | 40     | 2.25 |
| Frenzy Plant                     | 100   | 45     | 2.22 |
| OBlast Burn                      | 110   | 50     | 2.20 |
| Avalanche                        | 90    | 45     | 2.00 |
| Draco Meteor                     | 150   | 75     | 2.00 |

▶ PvP charge moves

The Effective Health (EH) measures the bulkiness of a Pokémon and is computed via the formula:

$$\mathsf{EH} = \tfrac{1}{900} \times \left(\mathsf{DEF} \ \mathsf{at} \ \mathsf{considered} \ \mathsf{level}\right) \times \left(\mathsf{HP} \ \mathsf{at} \ \mathsf{considered} \ \mathsf{level}\right)$$

where DEF at considered level = (Base DEF + IV DEF)  $\times$  coeff\_level and HP at considered level = (Base HP + IV HP)  $\times$  coeff\_level Examples of coefficients are

| Level       | Level 20 | Level 25 | Level 30 | Level 35   | Level 40 |
|-------------|----------|----------|----------|------------|----------|
| coeff_level | 0.5974   | 0.667934 | 0.7317   | 0.76156384 | 0.7903   |

For Great league (CP  $\leq$  1500), a good effective health must be higher than 25.

► For Ultra league (CP ≤ 2500) and Master league (no CP limit), a good effective health must be higher than 30. Below, the Pokémon remains fragile. The Pokémon can be considered as very bulky if its effective health is higher than 35.

Optimal IV and level (only for Great and Ultra leagues)

We would like to compare Moltres and Charizard

For Moltres, the effective stats are

| ATK IV | DEF IV | HP IV | LVL  | CP   | ATK | DEF | HP  | SUM | EH    |
|--------|--------|-------|------|------|-----|-----|-----|-----|-------|
| 15     | 15     | 15    | 25   | 2475 | 177 | 130 | 148 | 455 | 19240 |
| 13     | 15     | 14    | 25.5 | 2500 | 178 | 132 | 149 | 459 | 19668 |
| 0      | 15     | 3     | 27.5 | 2499 | 175 | 137 | 147 | 459 | 20139 |
| 1      | 3      | 15    | 27.5 | 2499 | 176 | 128 | 155 | 459 | 19840 |

For Charizard, the effective stats are:

| ATK IV | DEF IV | HP IV | LVL  | CP   | ATK | DEF | HP  | SUM | EH    |
|--------|--------|-------|------|------|-----|-----|-----|-----|-------|
| 15     | 15     | 15    | 30.5 | 2497 | 174 | 138 | 147 | 459 | 20286 |
| 15     | 0      | 0     | 35.5 | 2495 | 181 | 132 | 142 | 455 | 18744 |
| 0      | 15     | 15    | 34.5 | 2494 | 169 | 142 | 152 | 463 | 21584 |
| 15     | 13     | 14    | 31   | 2498 | 175 | 137 | 147 | 459 | 20139 |

Moltres (13, 15, 14) has better statistics for Ultra league than Moltres (15, 15, 15). For each league, there is an optimal IV set and level that maximises attack, defence and HP statistics. For Master league, the optimal IV set is (15, 15, 15) and optimal level is 40. Furthermore, Charizard (15, 13, 14) at level 31 and Moltres (0, 15, 3) at level 27.5 have exactly same statistics. To determine which one is most interesting in PvP, we must look at their moves. For more details:

▶ More details on optimal IV

PvP simulator:

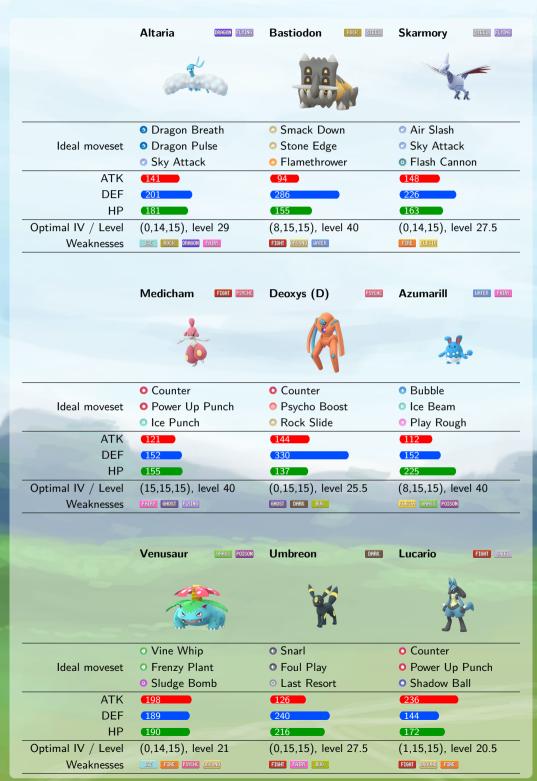

Once you got your three medals, don't forget to steal their look:
